

TBS - HONEYWELL IQ MULTIACCESS INTEGRATION

INTEGRATED ENTERPRISE BIOMETRIC ACCESS CONTROL

TBS and Honeywell partner together to bring the best of security solutions. Integrating first-rate biometrics into IQMA provides great opportunities for a truly end-to-end and all-encompassing access control system.

Designed by Honeywell, [IQ MultiAccess](#) (IQMA) is the leading application for programming and managing access control and alarm technology. Usable with practically the entire Honeywell Security portfolio as well as numerous third-party systems, IQMA makes it possible to smoothly integrate security technology. High standards of security, accuracy and ease of integration are also recognizable criteria of the Swiss-based biometric specialist Touchless Biometric Systems.

Biometrics as security criteria

TBS and Honeywell joined forces to provide a fully integrated system for access control. Biometrics acts as a principal access medium, a key which protects from security risks inherent to other systems. It cannot be forgotten, lost, stolen or copied. With TBS, IQMA installers can address also increased security requirements of customers. Unambiguous allocation

Integration details

For installers, the seamless integration means a smooth and easy installation from the start, guided by a clever installation helper tool that checks and installs all necessary prerequisites.

During operation, the system administrator can manage biometrics from within IQMA. The enrollment process is easy, templates are captured directly in IQMA and supported by a comfortable user guidance for finger capturing. Any changes to biometric data are synchronized automatically within the TBS biometric subsystem among all connected TBS readers. Additionally, user-based actions can also be set, like controlling the alarm system from the TBS touchscreen.

What are the benefits of the integration?

The TBS - IQMA integration strikes a chord to those who not only need reliable biometric solutions but as well are seeking top quality. Design and hygiene sensitive requirements (in the form of touchless solutions) are key elements in the TBS product portfolio. TBS products offer an improved biometric recognition, due to a combination of quality sensors and software algorithms which results in more accurate data capturing and evaluation, even for a large number of users. Installers and customers alike will appreciate the expansion capacity of the combined systems, not only at the level of applications but as well the possibility to use different types of biometric sensors to cover security and convenience where it is needed. Furthermore, TBS offers both touch and touchless biometric readers, ideal solutions for different types of customers with different considerations in mind.

Endless business opportunities

With the IQMA-TBS integration we reach markets with new security requirements in combination with a symbiosis of function and design. For consultants, integrators and installers who are experts in their field, adding biometrics creates new business opportunities: to expand to a new customer base, to update existing outdated systems or to expand existing installations with regards to hardware, options and services.

Endless growth opportunities

Businesses and organizations can also greatly benefit from a more complete, holistic and flexible solution. In many areas, the TBS-IQMA combination addresses the needs of security, convenience and a unified management system. This is precisely the right solution for sectors such as government, finance, insurance, food manufacturing, labs and research institutions and healthcare. TBS products impress due to their elegant design, attractive interface and trustworthy security.
